

# GRAFISKE BRUKERGRENSESNITT

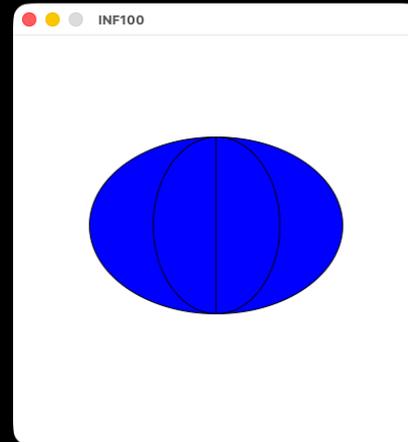

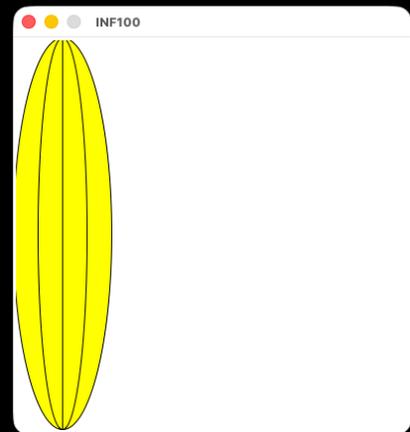

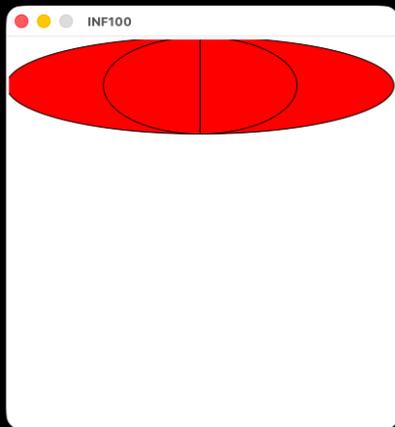

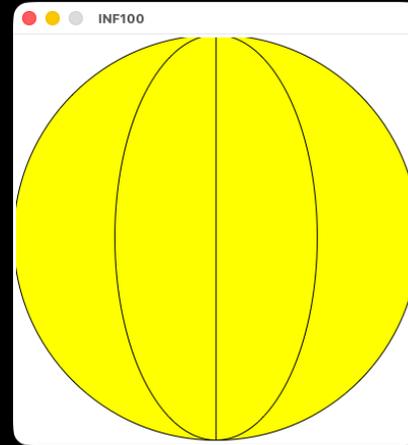

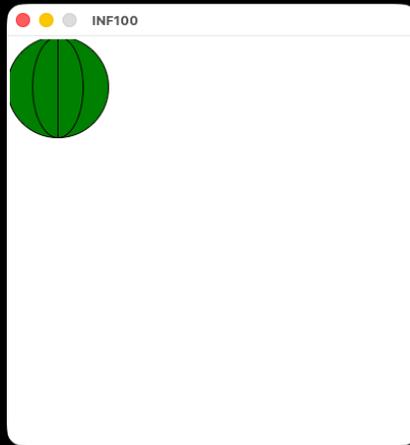

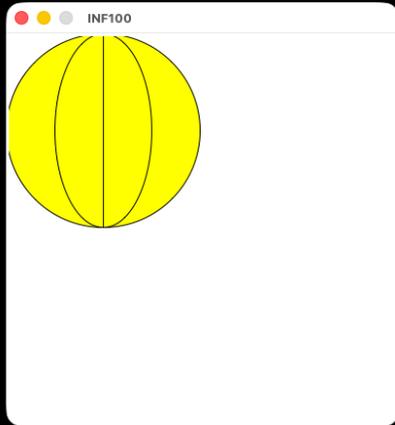

INF100

VÅR 2026

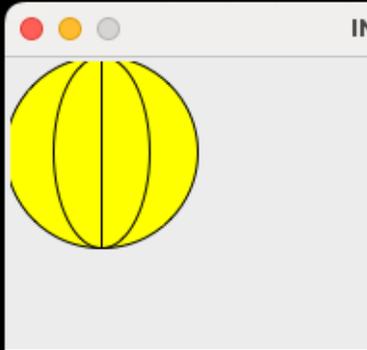

Crystal Chang Din

Med bidrag fra: Torstein Strømme

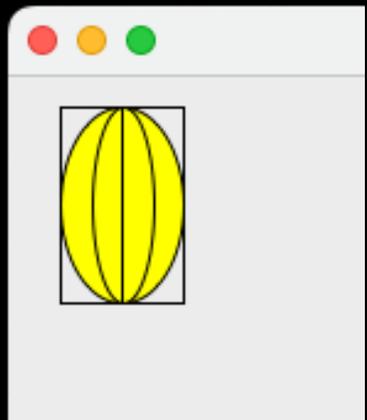

# FLEKSIBLE TEGNINGER

# FLEKSIBLE TEGNINGER

```
def draw_ball_fixed(canvas):  
    canvas.create_oval(0, 0, 200, 200, fill='yellow')  
    canvas.create_oval(20, 0, 150, 200)  
    canvas.create_line(100, 0, 100, 200)
```

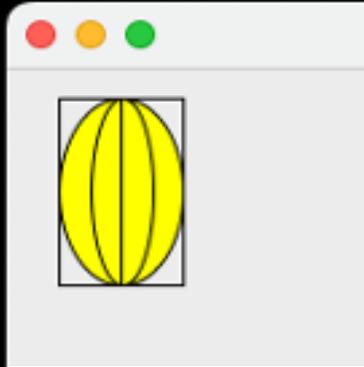

```
def draw_ball_scaled(canvas, width, height):  
    ...
```

```
def draw_ball_shifted(canvas, dx, dy):  
    ...
```

```
def draw_ball_in_box(canvas, x1, y1, x2, y2):  
    ...
```

# FLEKSIBLE TEGNINGER

```
def draw_ball_in_box(canvas, x1, y1, x2, y2):  
    std_width = 200  
    std_height = 200  
    width = x2 - x1  
    height = y2 - y1  
    w_factor = width / std_width  
    h_factor = height / std_height
```

```
canvas.create_oval(  
    0 * w_factor + x1,  
    0 * h_factor + y1,  
    100 * w_factor + x1,  
    100 * h_factor + y1,  
    fill='yellow'  
)
```

samme som før

alle x-verdier

alle y-verdier

...

EVENT\_APP

```
from uib_inf100_graphics.event_app import run_app

def app_started(app):
    app.count = 42

def key_pressed(app, event):
    app.count += 1

def redraw_all(app, canvas):
    cx = app.width / 2
    cy = app.height / 2
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')

run_app(width=500, height=200)
```

```
from uib_inf100_graphics.event_app import run_app

def app_started(app):
    app.count = 42

def key_pressed(app, event):
    app.count += 1

def redraw_all(app, canvas):
    cx = app.width / 2
    cy = app.height / 2
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')

run_app(width=500, height=200)
```

```
from uib_inf100_graphics.event_app import run_app

def app_started(app):
    app.count = 42

def key_pressed(app, event):
    app.count += 1

def redraw_all(app, canvas):
    cx = app.width / 2
    cy = app.height / 2
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')
```

```
run_app(width=500, height=200)
```

← for å starte programmet

```
from uib_inf100_graphics.event_app import run_app
```

```
def app_started(app):  
    app.count = 42
```

```
def key_pressed(app, event):  
    app.count += 1
```

```
def redraw_all(app, canvas):  
    cx = app.width / 2  
    cy = app.height / 2  
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')
```

```
run_app(width=500, height=200)
```

← kalles når programmet starter

```
from uib_inf100_graphics.event_app import run_app
```

```
def app_started(app):  
    app.count = 42  
  
def key_pressed(app, event):  
    app.count += 1  
  
def redraw_all(app, canvas):  
    cx = app.width / 2  
    cy = app.height / 2  
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')  
  
run_app(width=500, height=200)
```

tenk på `app` som en samling med variabler

```
from uib_inf100_graphics.event_app import run_app
```

```
def app_started(app):
```

```
    app.count = 42
```

```
def key_pressed(app, event):
```

```
    app.count += 1
```

```
def redraw_all(app, canvas):
```

```
    cx = app.width / 2
```

```
    cy = app.height / 2
```

```
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')
```

```
run_app(width=500, height=200)
```

← oppretter en ny variabel «count»

```
from uib_inf100_graphics.event_app import run_app
```

```
def app_started(app):  
    app.count = 42
```

```
def key_pressed(app, event):  
    app.count += 1
```

kalles (av `uib_inf100_graphics`) når lerretet skal tegnes

```
def redraw_all(app, canvas):  
    cx = app.width / 2  
    cy = app.height / 2  
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')
```

```
run_app(width=500, height=200)
```

```
from uib_inf100_graphics.event_app import run_app

def app_started(app):
    app.count = 42

def key_pressed(app, event):
    app.count += 1

def redraw_all(app, canvas):
    cx = app.width / 2
    cy = app.height / 2
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')

run_app(width=500, height=200)
```

tegning gjøres akkurat som før

```
from uib_inf100_graphics.event_app import run_app

def app_started(app):
    app.count = 42

def key_pressed(app, event):
    app.count += 1

def redraw_all(app, canvas):
    cx = app.width / 2
    cy = app.height / 2
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')

run_app(width=500, height=200)
```

variabler for width og height finnes i app fra før

```
from uib_inf100_graphics.event_app import run_app
```

```
def app_started(app):  
    app.count = 42
```

```
def key_pressed(app, event):  
    app.count += 1
```

```
def redraw_all(app, canvas):  
    cx = app.width / 2  
    cy = app.height / 2  
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')
```

```
run_app(width=500, height=200)
```

variabel vi nettopp opprettet i app\_started

```
from uib_inf100_graphics.event_app import run_app
```

```
def app_started(app):  
    app.count = 42
```

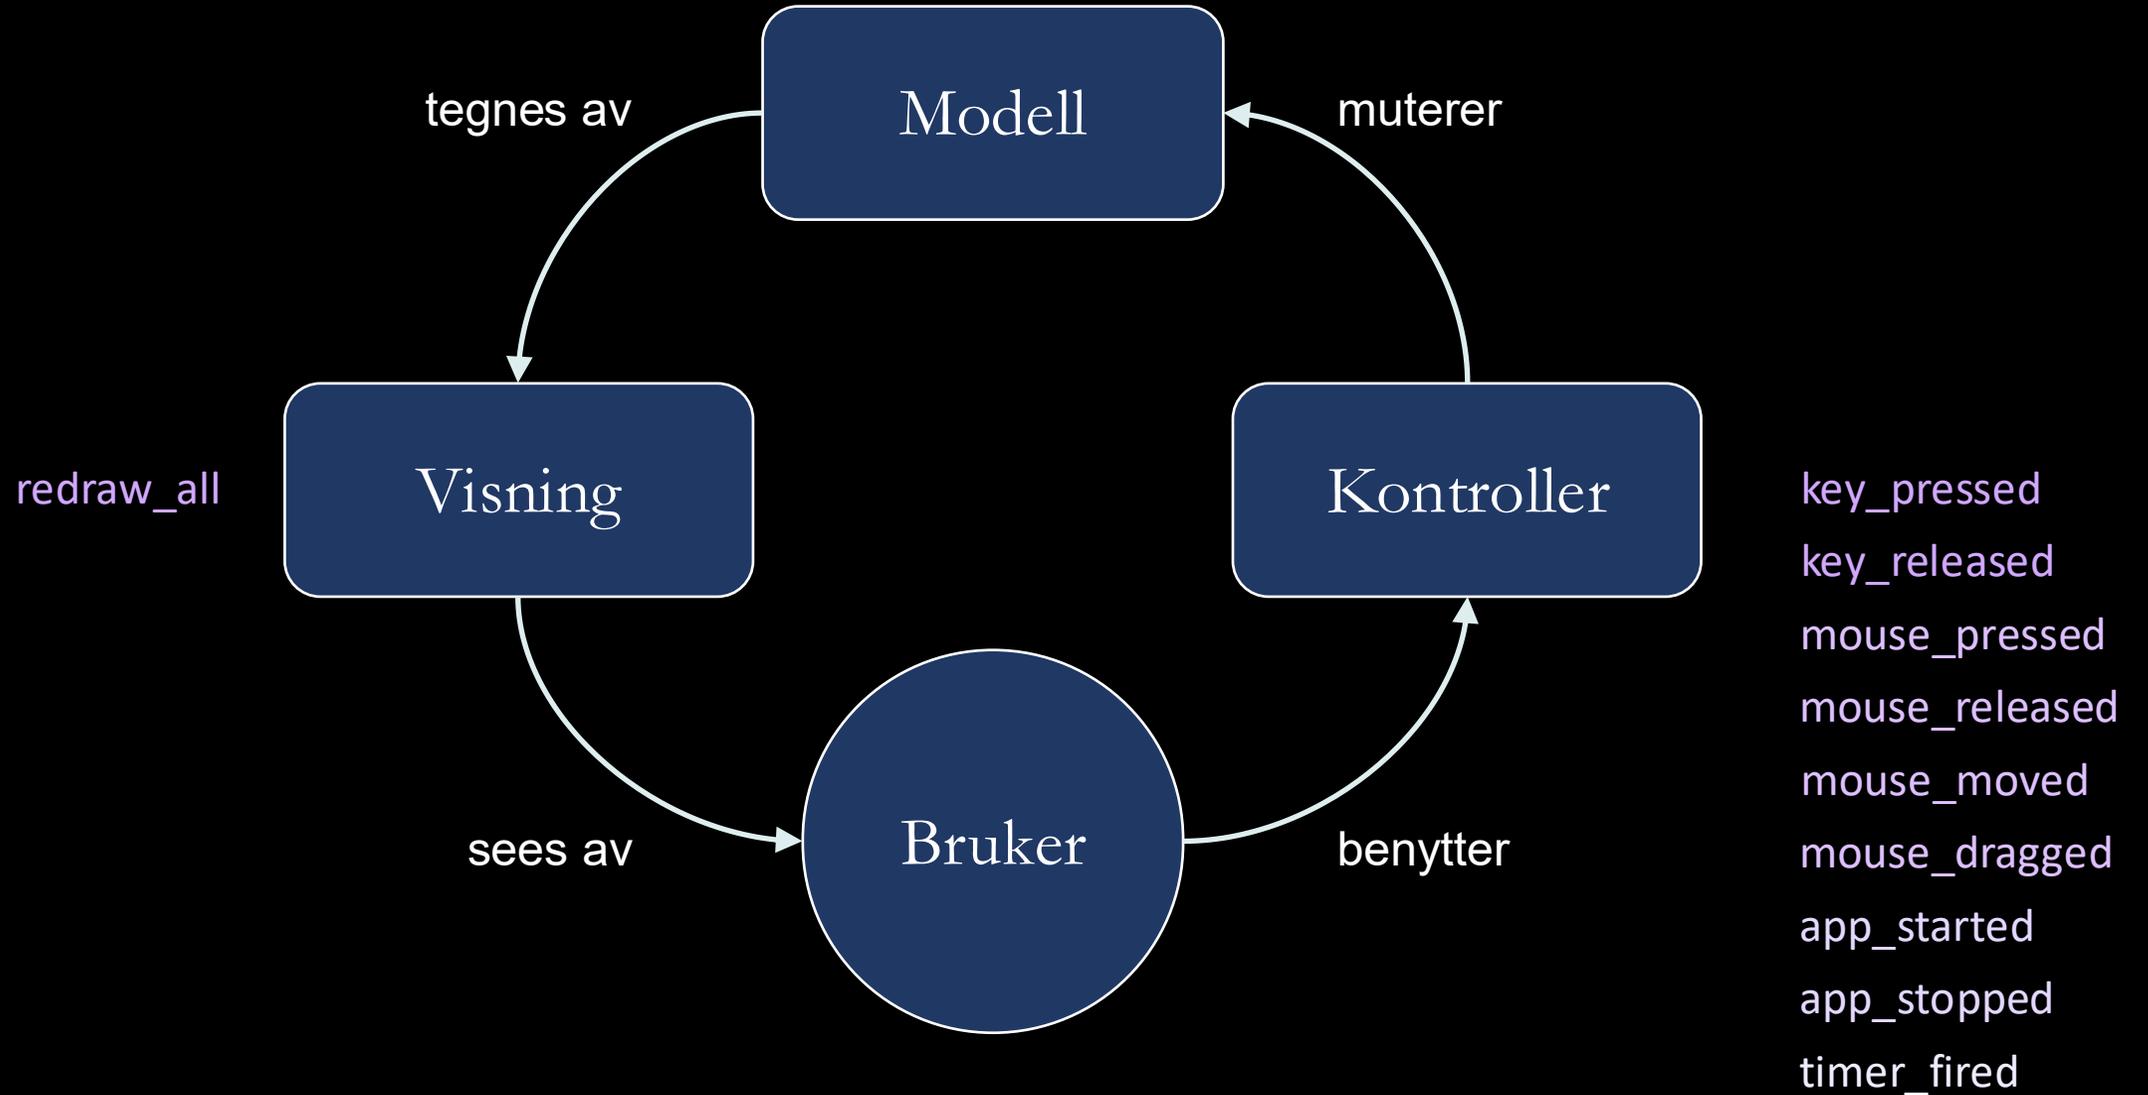

```
def key_pressed(app, event):  
    app.count += 1
```

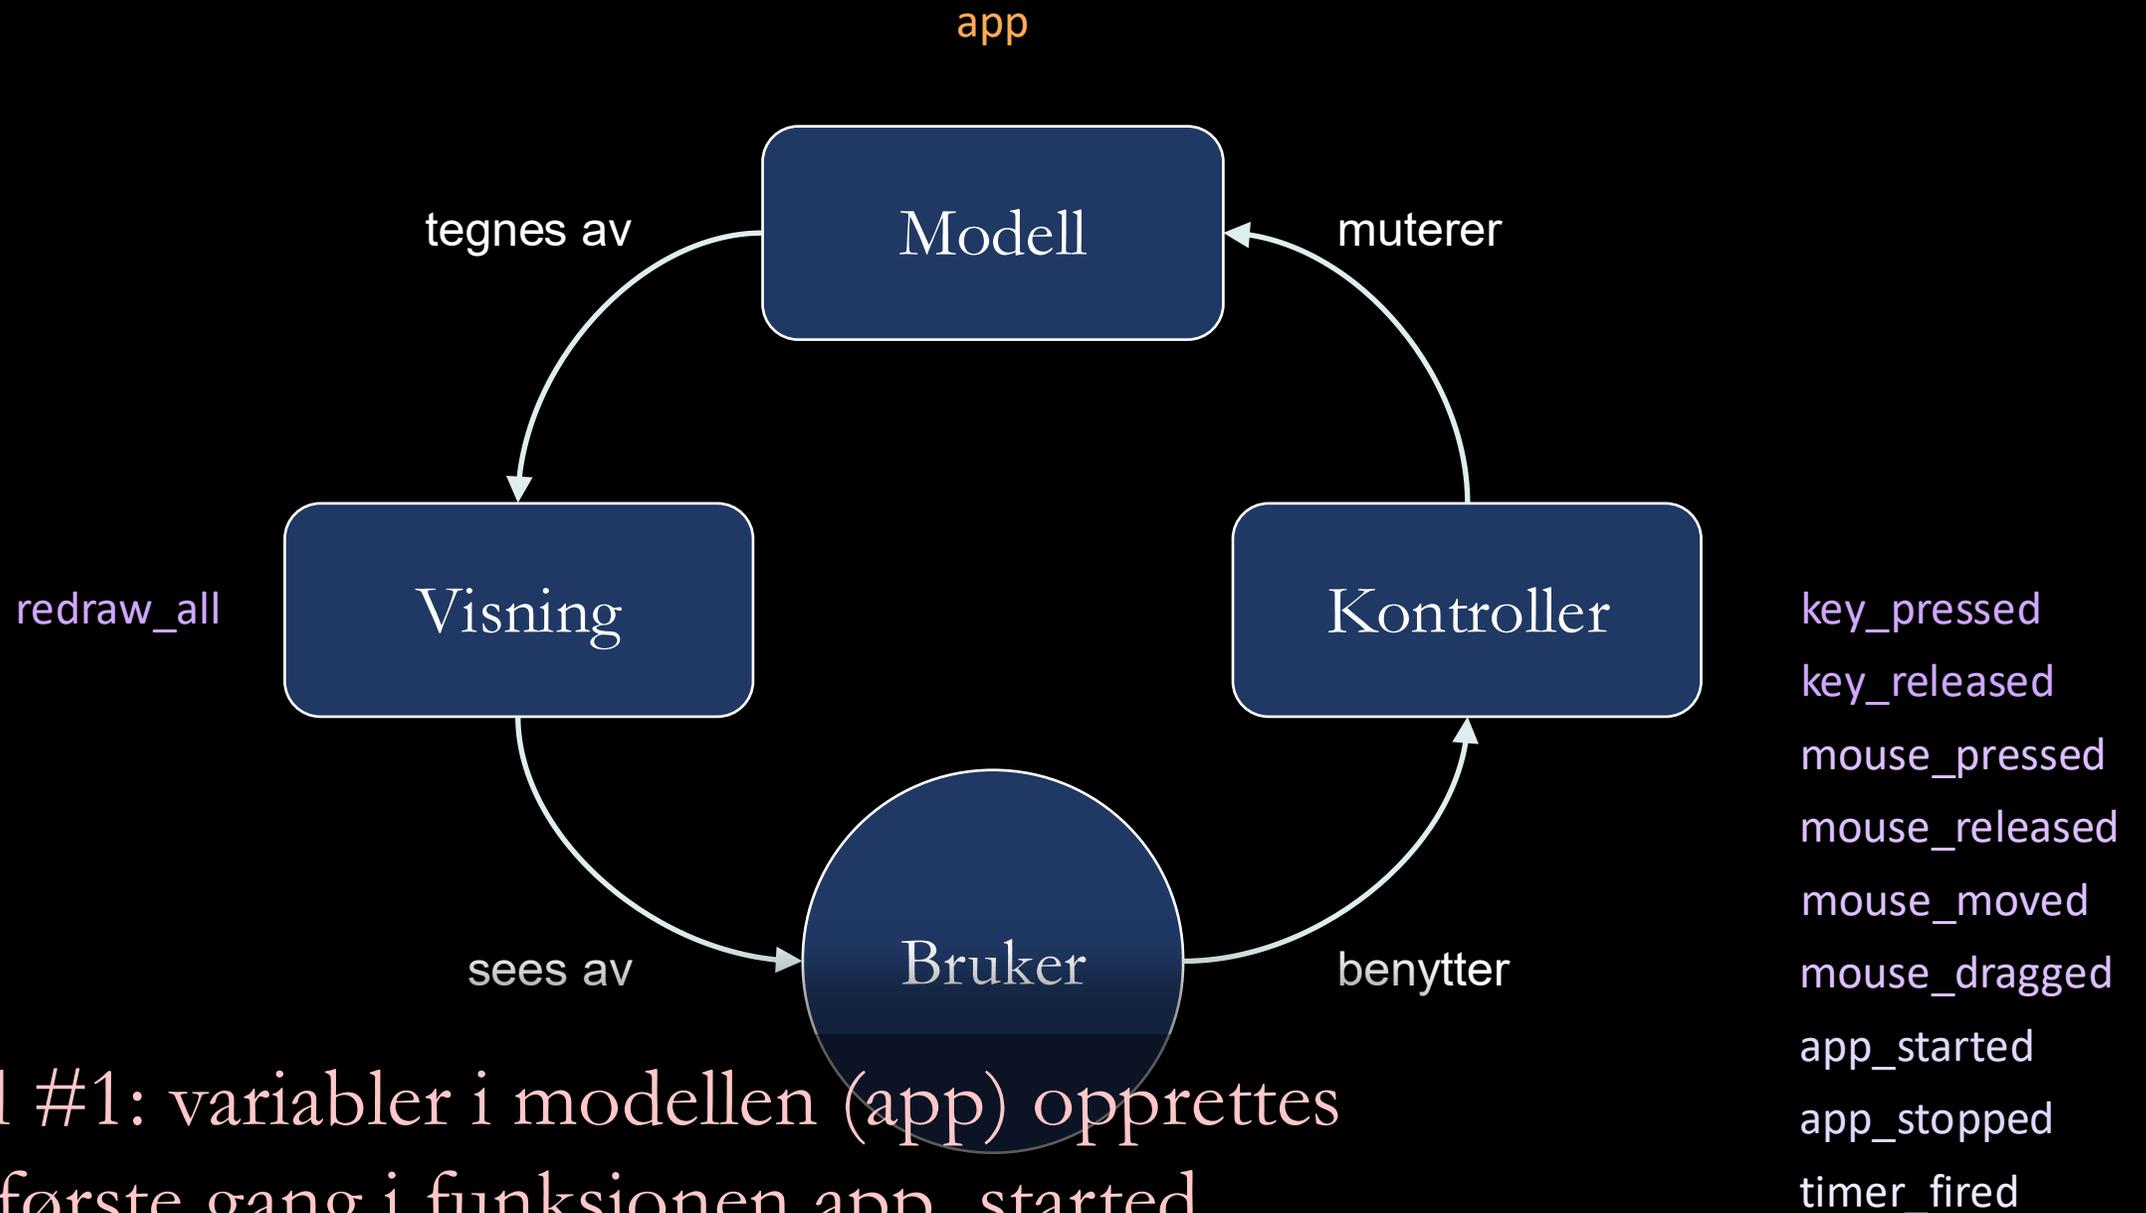

```
def redraw_all(app, canvas):  
    cx = app.width / 2  
    cy = app.height / 2  
    canvas.create_text(cx, cy, text=f'{app.count}', font='Arial 60')
```

```
run_app(width=500, height=200)
```

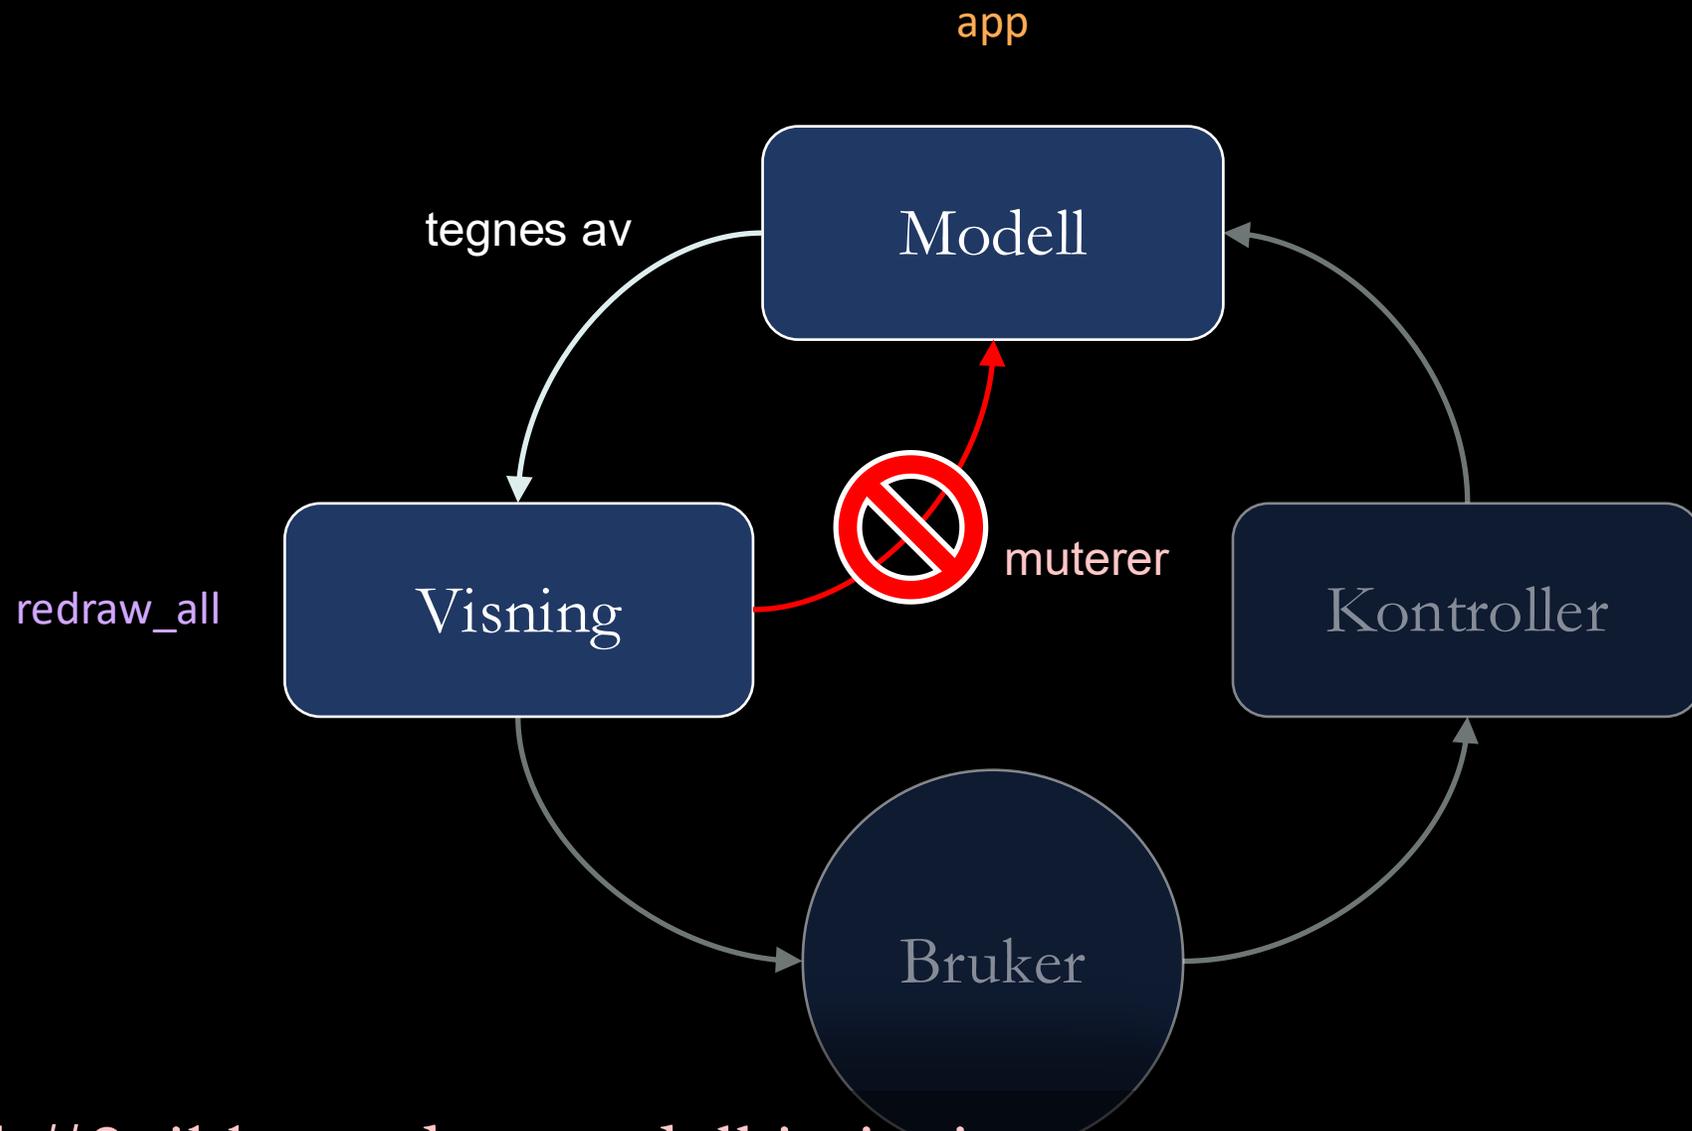

← kalles hver gang en tast trykkes

app

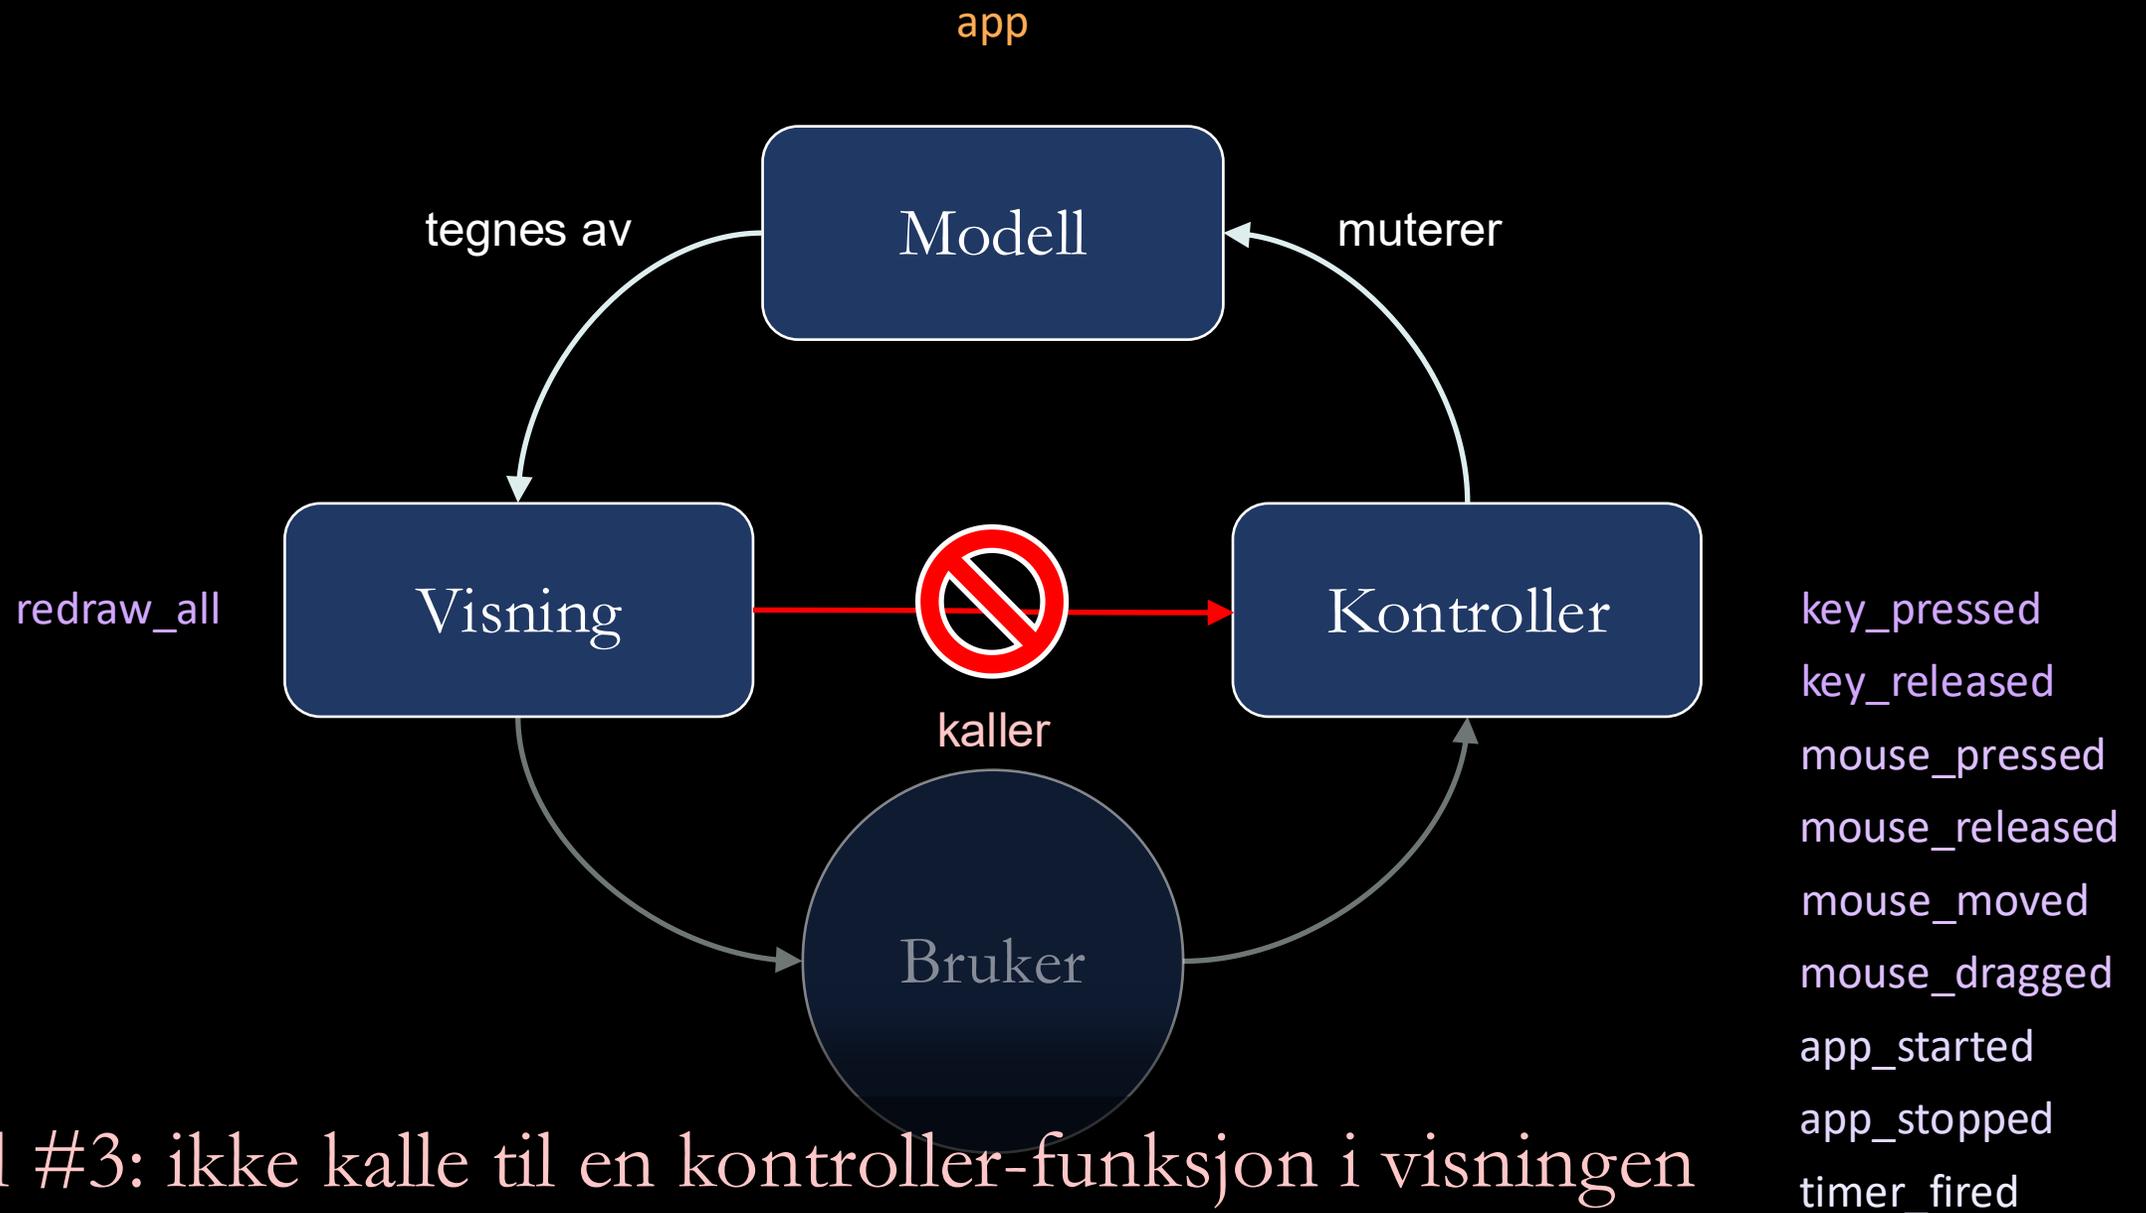

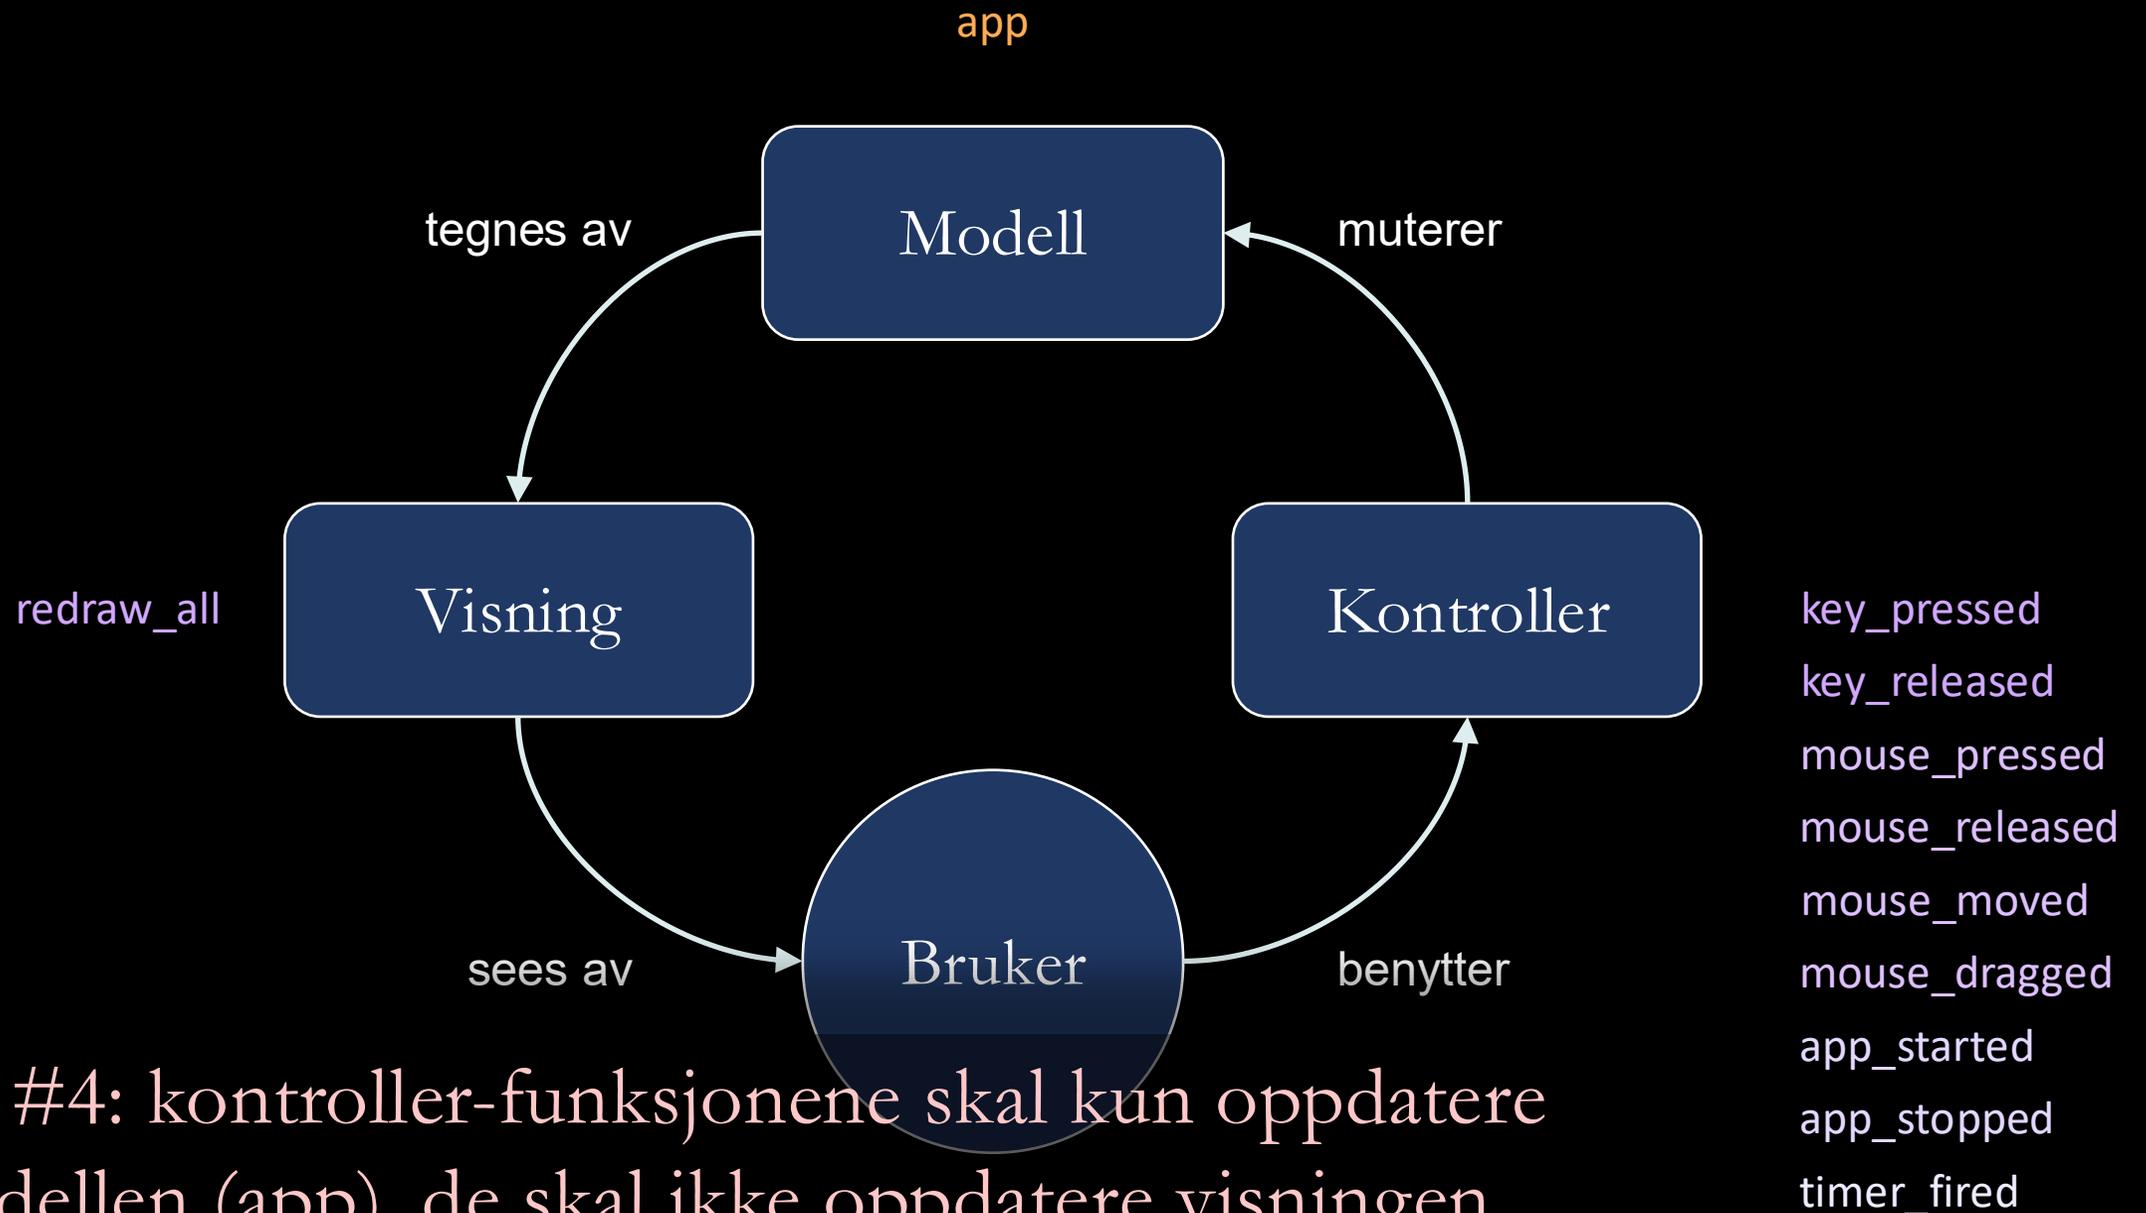

Regel #1: variabler i modellen (app) opprettes første gang i funksjonen app\_started

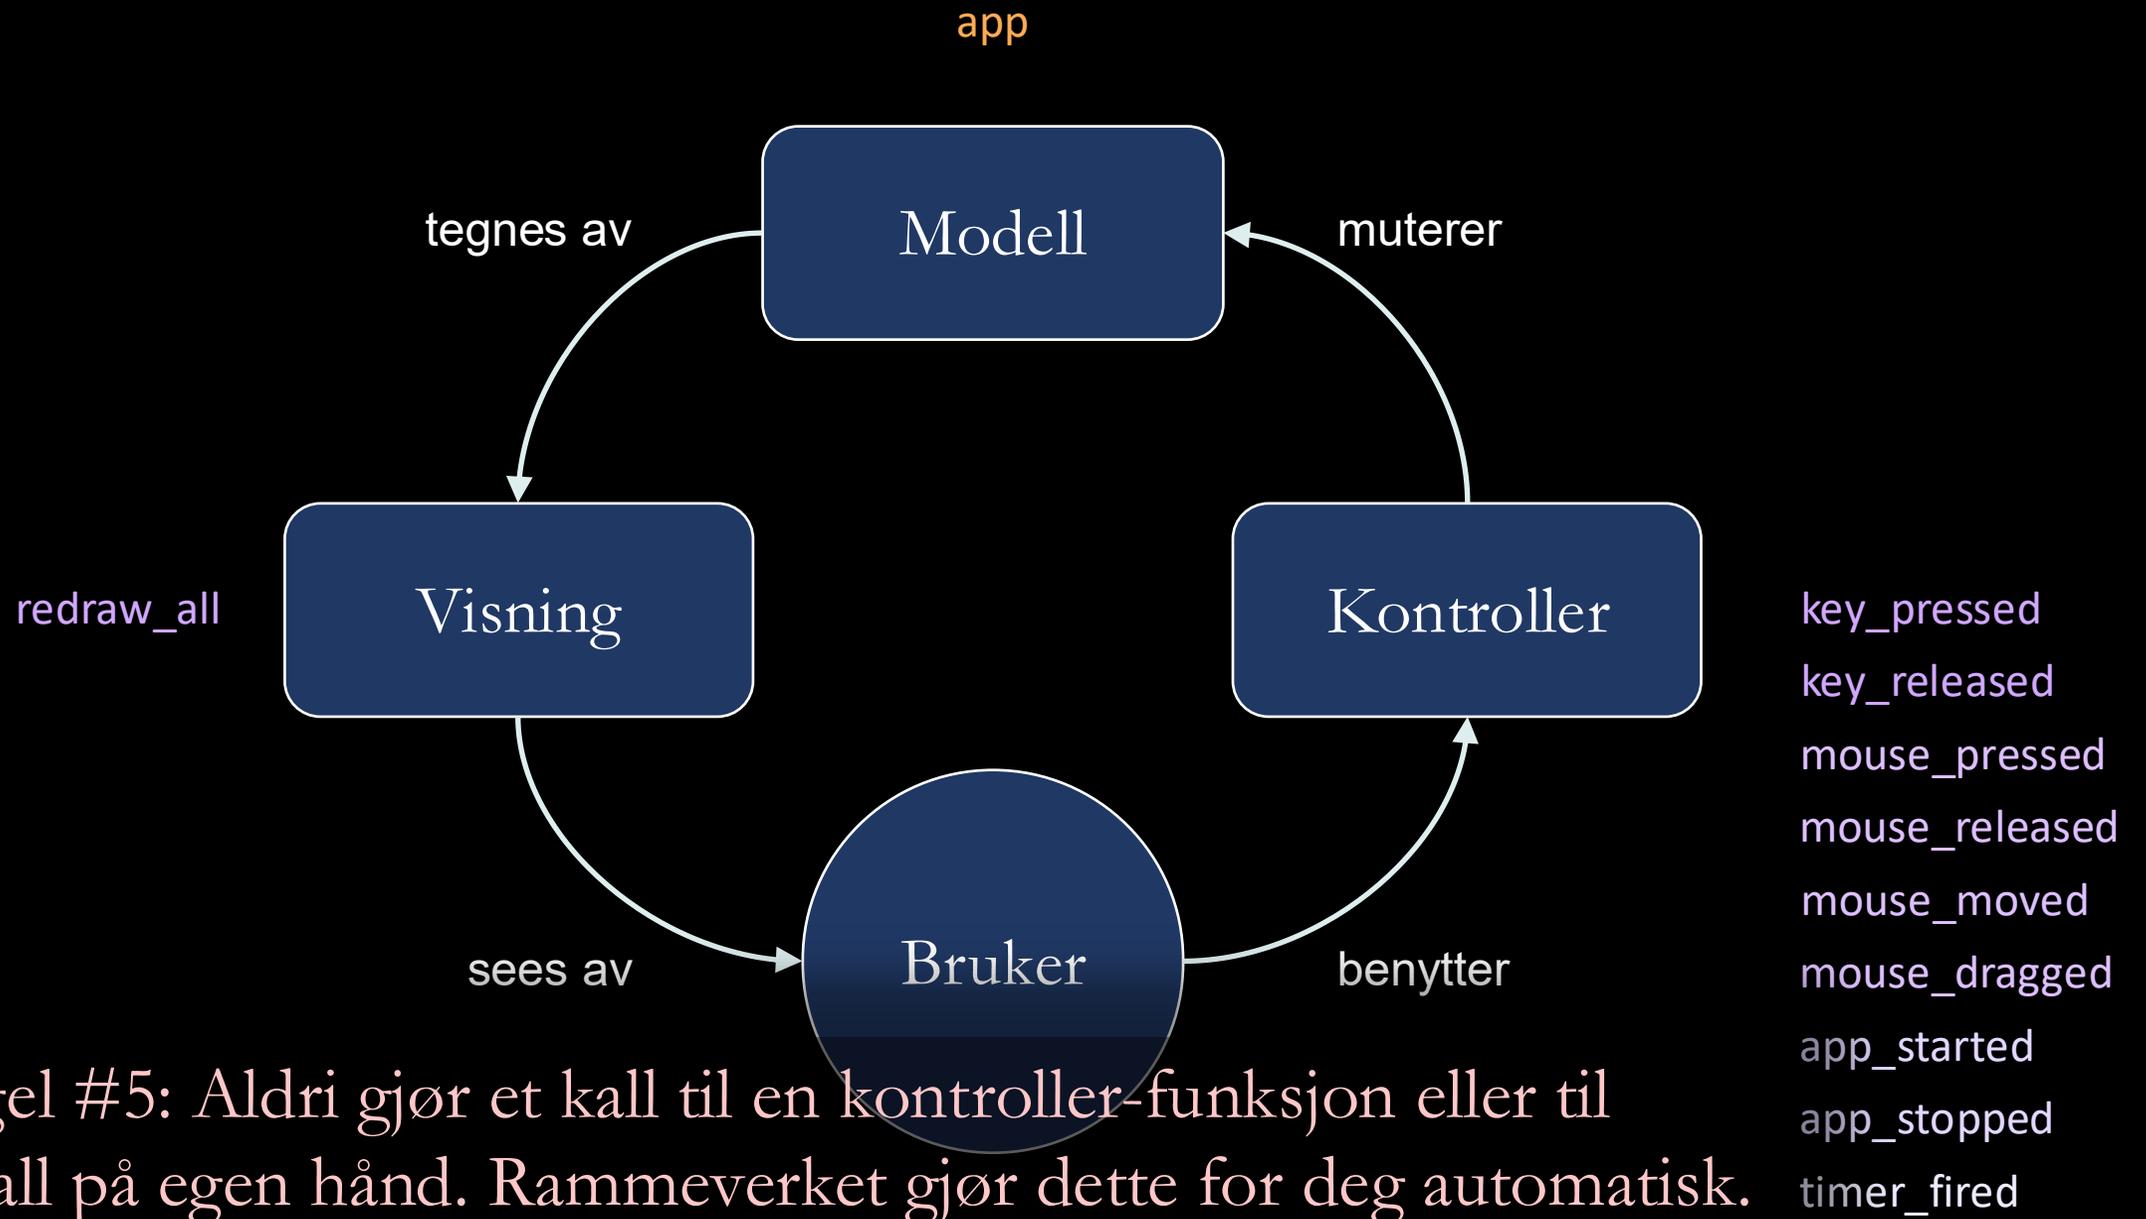

Regel #2: ikke endre modell i visningen

Regel #3: ikke kalle til en kontroller-funksjon i visningen

Regel #4: kontroller-funksjonene skal kun oppdatere modellen (app), de skal ikke oppdatere visningen

Regel #5: Aldri gjør et kall til en kontroller-funksjon eller til `redraw_all` på egen hånd. Rammeverket gjør dette for deg automatisk.
